

A group of poor explorers hoping to get rich quickly heads out to recover treasures from some undersea ruins. They're all rivals, but their budgets force them all to share a single rented submarine. In the rented submarine, they all have to share a single tank of air as well. If they don't get back to the sub before they run out of air, they'll drop all their treasure. Now it's time to see who can retrieve the greatest riches.

Set Contents

► Special Dice: 2 ► Explorer Pieces: 6 ► Air Marker: 1 ► Submarine Board: 1

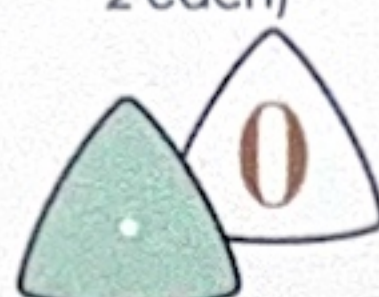

► Blank Chips:

► Ruins Chips:

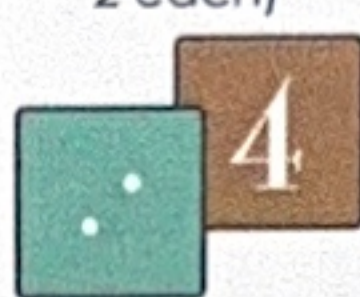

8 each,
4 types
Total: 32

Level 1
(0-3 on front,
2 each)

Back - Front

Level 2
(4-7 on front,
2 each)

Back - Front

Level 3
(8-11 on front,
2 each)

Back - Front

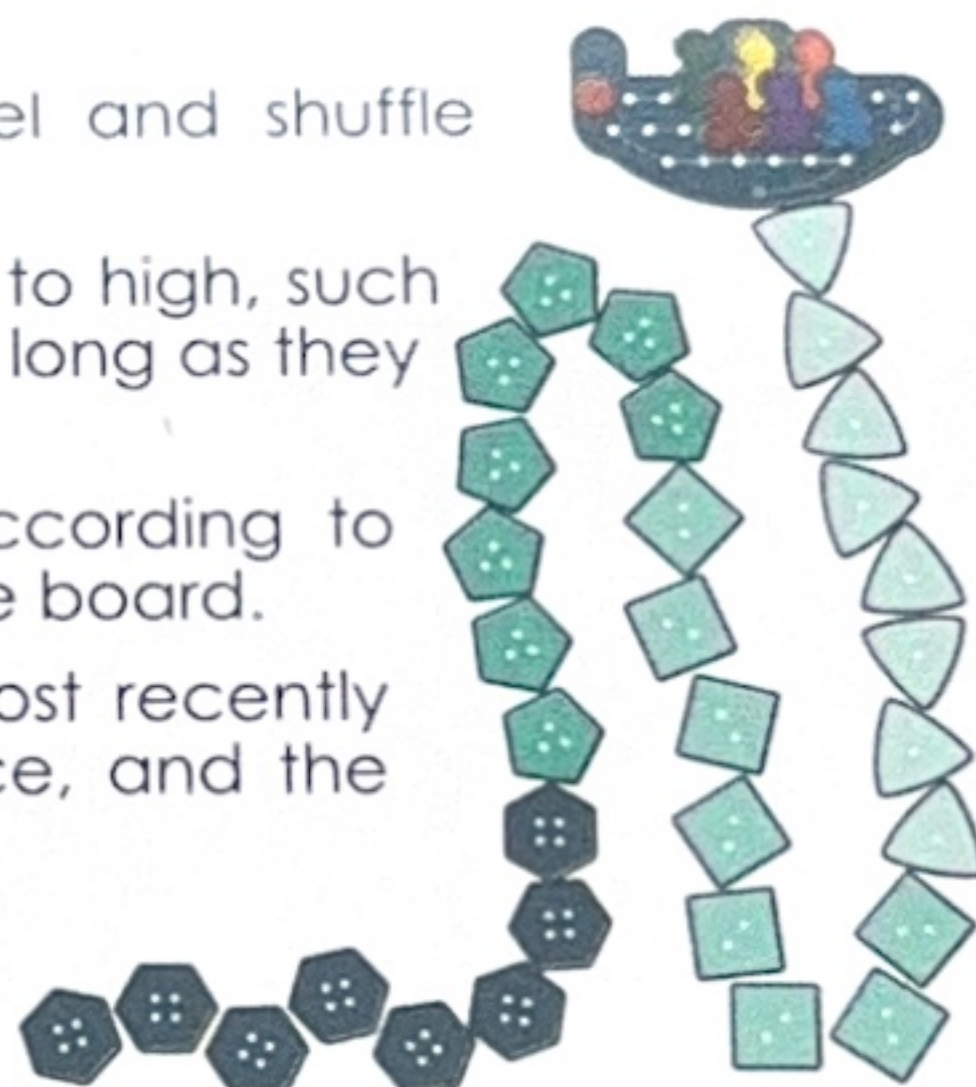

Level 4
(12-15 on front,
2 each)

Back - Front

Preparations

- Place the submarine board where it is clearly visible to all players.
- Place the air marker over "25" on the submarine board. This displays the remaining amount of air in the submarine.
- Turn over all ruins chips, separate by level and shuffle thoroughly.
- Line up ruins chips in order by level from low to high, such that they connect to the submarine board. As long as they form a single line, any arrangement is fine.
- Players take one explorer piece each, according to preference, and place these on the submarine board.
- The person who has been in the ocean most recently takes the first turn. If no one has, roll the dice, and the player who rolls the highest number goes first.

Game Objective

The game takes place over 3 rounds, and the player to gain the most points over the 3 rounds is the winner. In order to gain points, you must bring the most ruins chips back to the submarine. ~~You can only return to the submarine once per round~~ and you cannot return to exploring after this.

Turn Progression

On their turns, players conduct steps 1-4 listed below. Players take turns, going clockwise around the board, and the round ends when all players have returned to the submarine, ~~or if the air runs out at the beginning of someone's turn.~~

① Reduce air

Reduce air from above the submarine board by the number of ruins chips you hold ("treasure" from previous rounds does not count). Even when the air falls below 0, the player may finish playing his or her turn. Players who have already returned to the submarine do not reduce the air supply.

② Declare if you will turn back or not

Say if you will turn back or go forward. ~~You can only change direction once per round.~~ If you decide to turn back, turn your Explorer Piece to face the submarine. You no longer have to decide the following moves. If you roll the dice without declaring anything, you must move in the same direction as the previous turn. Also, on the first turn of a round, you cannot choose to turn back.

③ Roll the dice and advance your game piece

Roll the dice together and move your explorer piece forward on the ruins chips that come up. When advancing over a ruins chip with another player's explorer piece on it, ~~jump over that ruins chip without counting it.~~

(③*) However, if you are holding any ruins chips you picked up that round, you must subtract the number of chips from the dice roll total.

(③*) Stop on the deepest point possible if you roll higher than ruins chips placed.

④ Search

When you have stopped moving, select one of A-C, below.

A) Do nothing**B) Pick up ruins chip**

In this case, take the ruins chip without flipping it over, fill in the location it was taken from with a blank chip, and place your explorer piece on top. (You cannot view the front of ruins chips collected until you return to the submarine with them.)

You can hold any number of ruins chips. However, holding 6 or more will leave you unable to move when rolling the dice, according to the rules under 3*.

C) Place a ruins chip

When you are holding a ruins chip you picked up that round, and you are stopped on a blank chip, you can place 1 ruins chip of your choice on that spot. Swap the blank chip you are stopped on for the ruins chip you hold, and return the blank chip to the bank.

The above steps conclude one full turn.

Turns pass to the next player in a clockwise direction, who repeats steps 1-4.

Round Conclusion

A round ends when all players return to the submarine, or when the air runs out. Players who made it back to the submarine and those who did not carry out the respective steps shown below.

**Players who made it back to the submarine:**

Turn over ruins chips you brought back, and check out their fronts. Front-facing ruins chips become "treasure", and count as points. These are not returned to their locations.

Players who did not make it back to the submarine:

Drop all of the treasure they picked up that round to the bottom of the ocean. In the order of furthest to closest to the submarine, players place the ruins chips they held back onto the board. **Each player's chips are stacked next to the ruins chip farthest from the submarine (in empty locations).**

Once three chips have been stacked, the fourth chip goes in the next spot. You can freely decide where to stack chips, but make sure they are always in stacks of three.

Stacks of three ruins chips placed in this way on a round's conclusion **are treated as a single ruins chip in subsequent rounds. All three should be picked up and placed together. They will also be treated as a single ruins chip in terms of how much air decreases and the amount moved on the board. They act as 3 chips worth of points when recovered as points.**

When all players have taken the actions above, **all blank chips are removed from the board, and all gaps are filled with the chips immediately behind them.**

Remove

Fill

The player farthest from the submarine becomes the first player, and the next round begins. If all players made it back, the last player to make it back to the submarine becomes the first player next round.

Game Conclusion and Victory

The game ends when the third round concludes. Points gained by players over all rounds are totaled. The player with the most points is declared the winner.

In case of a tie in player point totals, the player with the most high-level ruins chips is the winner. When the players have the same number of high-level ruins chips, the game ends in a draw.
